SUMMARY

Full Stack Developer with 4 years of experience shipping production SaaS and AI-powered web applications. Frontend lead on two live subscription-based multi-tenant platforms — an SEO automation SaaS and an enterprise cyber threat intelligence platform — owning frontend architecture, system design and RBAC on both, while also building backend services in Django (Python) and Node.js. Implemented automation pipelines and a full-stack RAG document-chat product using PostgreSQL pgVector, OpenAI embeddings and streaming responses. Delivered 15+ client projects from requirement gathering through to production release.

TECHNICAL SKILLS

Frontend: React.js, Next.js, JavaScript (ES6+), TypeScript, Redux, Tailwind CSS, HTML5, CSS3, responsive design

Backend: Node.js, Express.js, Python, Django, REST APIs, JWT authentication, Prisma ORM

Databases: PostgreSQL, pgVector, MySQL, MongoDB

AI Engineering: OpenAI API, embeddings, RAG pipelines, vector search, streaming responses

Automation: scheduled jobs, workflow automation, third-party API integrations, auto-publishing pipelines

Architecture: Multi-tenant SaaS, role-based access control (RBAC), modular frontend architecture

Cloud & DevOps: AWS (EC2, S3), Docker, GitHub Actions, CI/CD

Other: Technical SEO, Core Web Vitals, performance optimisation, Figma to code, Agile / Scrum

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer (Frontend Lead) | WOLFX Digital Agency

Dec 2023 – Present | Mumbai, India (On-site)

- Frontend lead on two live subscription-based multi-tenant SaaS products (detailed below), owning frontend architecture, system design, and role-based access control end to end.
- Work across the backend as well as the frontend — building and maintaining REST services in Django (Python) and Node.js / Express.js against PostgreSQL, covering data modelling, API design, authentication and deployment.
- Designed and implemented automation pipelines — scheduled background jobs, AI content generation workflows and auto-publishing to third-party platforms — removing manual steps from recurring client workflows.
- Built a full-stack AI document-chat application with an end-to-end RAG pipeline: Node.js and Express.js backend, PostgreSQL with pgVector for semantic search, OpenAI embeddings for retrieval, React frontend, JWT authentication, and real-time streaming responses.
- Implemented structured on-page SEO and Core Web Vitals optimisation, raising Lighthouse performance scores by approximately 35% across production deployments.
- Delivered 15+ client projects, including 4 SaaS platforms and 3 mobile applications, from requirements through to production release while managing timelines independently.
- Mentored 4 frontend interns, established reusable UI component standards, and introduced code-review workflows that reduced pull-request turnaround time.

Stack: React, Next.js, TypeScript, Tailwind CSS, Node.js, Express.js, Python, Django, PostgreSQL, pgVector, OpenAI API, AWS (EC2 / S3), Docker, GitHub Actions.

Frontend Developer | Employee Forums

Feb 2023 – Dec 2023 | Mumbai, India (On-site)

- Developed responsive, mobile-first web applications using Next.js and Tailwind CSS for a B2B platform serving thousands of monthly active users.
- Built a reusable component library adopted across the frontend team, cutting development time for new features by an estimated 30%.
- Converted Figma designs into pixel-perfect interfaces, working directly with the design team in an Agile sprint workflow to shorten the design-to-code cycle.

KEY PROJECTS

A Simple Tool | asimpletool.com

Multi-tenant SEO / GEO automation SaaS • Frontend lead & full stack developer

- Sole developer and frontend architect of a subscription-based multi-tenant SaaS automating the full SEO pipeline — competitor analysis, keyword discovery, 30-day content calendar generation, AI article and image creation, and scheduled auto-publishing.
- Architected the entire frontend independently in Next.js: tenant-isolated dashboards, subscription and plan-gating logic, single-URL onboarding flow, and a calendar/editor interface for reviewing AI-generated articles before publish.
- Built the backend automation layer behind the pipeline — scheduled job orchestration, AI generation workflows and publishing queues — plus automated publishing integrations for WordPress, Shopify and custom sites, and Google Search Console and Google Analytics sync to surface ranking and traffic insights in-app.
- Shipped a public suite of 7 free SEO tools (meta tag checker, Open Graph previewer, schema validator, link analyzer and others) as an organic acquisition channel, and implemented the platform's own technical SEO and GEO layer targeting AI answer engines alongside Google.

ThreatWatch360 | threatwatch360.com

Enterprise cyber threat intelligence platform • Frontend lead

- Frontend lead on a subscription-based multi-tenant cyber threat intelligence platform for enterprise security teams; designed the frontend system architecture and role-based access control model from scratch.
- Built the frontend for 7 security modules — attack surface management, anti-phishing, anti-rogue, dark web breach monitoring, takedown-as-a-service, early warning and social media monitoring — under one unified dashboard.
- Implemented RBAC with tenant isolation, allowing client organisations to scope analyst, admin and read-only access across modules with no data leakage between tenants.
- Developed data-dense reporting interfaces for continuously discovered assets, prioritised vulnerability findings, correlated attack paths and A-F risk grading, with real-time alerting on newly detected exposures.

EDUCATION

Bachelor of Business Administration

DY Patil University, India | 2021 – 2024
